

PalmMind AI — Official Company Policies

1. Code Quality & Peer Reviews

All code submissions must be integrated through Pull Requests targeting the 'main' branch. Each PR requires a minimum of one passing peer review from a senior engineer and 100% successful passing coverage on GitHub Actions CI/CD pipelines before merge approvals. Standard formatting rules are strictly enforced using the 'Black' format checker.

2. Operational Security Guidelines

Security is our highest operational priority. Never check passwords, API tokens, email passwords, or database connection strings directly into Git version control. Always utilize dynamic ``.env`` loading layers, and verify that all configuration keys are covered under active ``.gitignore`` rules. Redis servers storing LangGraph session checkpoints must be isolated from the public network and run under strict local bindings.

3. Annual Vacation & Administrative Leave

We mandate a minimum of 20 days of paid administrative leave per year. Work-life harmony is critical to achieving high engineering output. Leave requests should be logged through our HR intranet portal at least one week in advance to ensure continuous coverage across active sprint cards.
